

NORTHERN SHIELD RESOURCES INC.

HUCKLEBERRY PROPERTY

- Mineralization in the Lower Olivine Websterite has strike-length of at least 3 km and down-dip extension of 1.2 km
- Mineralization in the Eastern Zone may be the result of “leakage” from massive sulphides at depth through co-magmatic faults
- The main mineralized zone consistently increase in thickness and PGE and Ni tenors in a down-dip direction and may represent a disseminated halo around a massive sulphide occurrence

NORTHERN SHIELD RESOURCES INC.
Suite 440,
55 Metcalfe Street
Ottawa, ON Canada K1P 6L5
